It's all about the ingredients

Armed against acne

Salicylic acid

Salicylic acid dissolves the skin debris that clogs pores to prevent acne, and reduces the size and redness of breakouts.

INSIDER SCIENCE

NEUTROGENA® MICROCLEAR® TECHNOLOGY

MicroClear® technology is a powerful, revolutionary way to fight the acne you can see and the acne you can't. It dissolves sebum and ushers salicylic acid deep within the follicle, letting you fight acne at the source of breakouts. Try Oil-Free Acne Wash, the #1 selling acne facial cleanser brand, formulated with MicroClear®. Also available in Body Clear.

Benzoyl peroxide

Dermatologists recommend benzoyl peroxide most to treat acne. It uses oxygen to fight *P. acnes*, which reduces breakouts. It also helps rid follicles of excess dead skin cells, reducing their likelihood of becoming clogged with sebum.

Light

Light therapy is a technology used in dermatology offices to treat acne. Blue light helps to kill the bacteria *P. acnes*, which contributes to acne, while red light works against inflammation.

INSIDER SCIENCE

NEUTROGENA® LIGHT THERAPY

Neutrogena® Light Therapy is a clinically proven at-home treatment for mild to moderate facial acne. Perfect for shoppers with sensitive skin, and it's recommended by dermatologists.

This chemical-free treatment combines blue and red light for antibacterial and anti-inflammatory action to allow the skin to heal, resulting in clearer, healthier skin.
